

Standard: Digital Learning Environment
Element: 3.7 Communication and Collaboration
Class: ITEC7410
Artifact: Shared Vision

Candidates utilize digital communication and collaboration tools to communicate locally and globally with students, parents, peers, and the larger community.

1. Briefly describe the artifact and the context in which it was created. What was your individual contribution(s)?

The artifact that I chose to show **communication and collaboration** is a shared vision statement. The shared vision statement is a result of **digital communication and collaboration** between the stakeholders of Adairsville Elementary School and myself.

2. Explain how this artifact demonstrates mastery of the standard/element under which it is placed.

Mastery of this standard is met through the completion of this standard. During the completion of this artifact I developed a survey of questions related to information that stakeholders would like to see included in the school's shared technology vision. To **digitally communicate** this survey I sent a school wide email through Outlook asking faculty and staff for input and used Facebook to ask parents for input. After stakeholders responded I used their **collaborative** responses and combined our thoughts to form a collaborative shared vision that included input from all stakeholders.

3. What did you learn from completing this artifact? What would you do differently to improve the quality of the artifact or the process involved in creating the artifact?

I learned that it is much easier to communicate and collaborate digitally. School was out for the summer so I was able to gather several responses even though we weren't face-to-face.

When doing another shared vision I would want to include students and the community. Because school was not in session and time was a factor this was not an option this time.

4. How did the work that went into creating the artifact impact school improvement, faculty development or student learning? How can the impact be assessed?

This artifact impacts school improvement and faculty development because a shared vision is not in place and needed to be developed. Through the use of **digital communication and collaboration** a shared vision could be developed using ideas and responses of several stakeholders

The impact of this artifact is assessed by the ability to develop the shared vision through the **communication and collaboration**. It was effective because I received responses and a shared vision was made using the **communication and collaboration** of stakeholders.
